EM-series Wire Polishing Machines

Die reconditioning

Highlights

- Versatile use: recutting, polishing, sizing
- Quick machine setup
- Easy to use
- Durable

Machines that are capable of recutting, repolishing and sizing drawing dies meet the demands of today's die-shop operators.

The reduction cone angle and bearing length of a drawing die wear during the wire drawing process. The EM-series wire polishing machines are used to recut and repolish these worn parts and to resize the drawing die to the required bearing length and bearing diameter.

Proven technology ensures that the versatile Esteves Group **EM-series wire polishing machines** give the die-shop operator the ability to use one machine to recut, repolish and resize drawing dies.

Esteves Group polishing machines are manufactured with the goal of versatility, durability and ease of use.

Virtually any type of die shop tooling is available from Esteves Group as well as in-house training for your recutting, repolishing and resizing needs.

We Specialize in...
